

Boltane — AI Automation

Terms & Conditions

Last updated: August 11, 2026

These Terms & Conditions ("Terms") govern the use of Boltane's AI-powered automation services, including WhatsApp and Telegram conversational assistants for restaurants and hospitality businesses. By purchasing, activating, or using any Boltane service, the client ("you," "the Client," or "the Restaurant") agrees to these Terms.

1. Service Description

Boltane builds and operates custom AI-powered conversational assistants that connect to a business's WhatsApp and/or Telegram accounts to handle customer inquiries automatically — including menu and pricing questions, reservation requests, business hours, and general customer support — in Arabic and English.

2. AI Technology

2.1 Default AI Model

Boltane's assistants are powered by **DeepSeek V4 Flash** by default, selected for its balance of response quality, speed, and cost-efficiency for conversational customer support.

2.2 Model Flexibility

Clients are not locked into a single AI provider. Upon request, Boltane can configure a Client's assistant to run on an alternative AI model (subject to technical feasibility and, where applicable, a pricing adjustment reflecting the alternative model's operating cost). This allows Clients to prioritize a different balance of speed, cost, or reasoning depth if their use case requires it.

2.3 Response Time

Under normal operating conditions, the assistant typically responds within **5–15 seconds** of receiving a customer message, depending on message complexity, current load, and network conditions. Boltane continuously works to reduce response latency and will notify Clients of any material, sustained change to expected response times.

3. Technical Infrastructure, Scaling & Architecture

3.1 Dedicated VPS Scaling Model

Boltane assistants run on dedicated Virtual Private Server (VPS) cloud infrastructure, engineered and partitioned to support a strict limit of **no more than 50 active client bot instances per server node**. This fixed capacity ratio prevents resource contention and maintains stable, high-speed performance across all operations.

Resource Dimension	Minimum Specification per 50 Active Bots
vCPU Cores	4 Dedicated Cores
System Memory (RAM)	8 GB RAM
Storage Media	100 GB High-Speed NVMe / SSD
Bandwidth Allowance	2 TB / month
Uptime SLA Target	99.5%+ uptime commitment

Infrastructure scales horizontally by deploying additional dedicated VPS units in identical increments as active client bot volume expands.

3.2 Integration Protocol — Meta WhatsApp Business Platform

WhatsApp-based assistants connect to a Client's phone number exclusively through the official **Meta WhatsApp Business Platform (Cloud API)**. Boltane strictly prohibits unofficial, unauthorized, or third-party modified clients, guaranteeing the Client's business account remains fully compliant with Meta policies and protected against suspension risks. Any Meta-imposed platform messaging tiers, verification requirements, or direct fees remain independent of Boltane's service charges.

3.3 Infrastructure Monitoring

Boltane conducts continuous health checks and automated telemetry across all active nodes, proactively alerting Clients should any sustained latency or degradation occur outside normal operational bounds.

4. Multi-Layered Technical Security Stack

To preserve operational integrity and guarantee total data safety for restaurant partners, Boltane deploys a strictly structured, multi-layered security stack organized across four technical tiers:

4.1 Layer 1: Edge & Network Security (WAF & DDoS Protection)

- **Cloudflare Enterprise / Pro WAF:** Reverse proxy architecture filtering malicious traffic, mitigating Distributed Denial of Service (DDoS) attacks, and concealing origin IP addresses.
- **Strict Network Firewall (UFW / iptables):** System-level blocking of all non-essential communication ports, permitting inbound connections only on essential secure web ports (80/443) and hardened non-standard SSH ports.
- **Intrusion Prevention (Fail2ban & CrowdSec):** Automated IP banning engines that detect brute-force SSH logins or abnormal payload requests and instantly block offending addresses.

4.2 Layer 2: Environment Isolation & Process Hardening

- **Docker Containerization:** Each restaurant's conversational assistant, state storage, and processing pipelines operate within fully isolated, restricted Docker containers. A vulnerability or issue in one instance cannot inspect, access, or compromise neighboring instances.
- **Host OS Hardening:** Operating system access is restricted strictly to Key-Based SSH authentication (Public/Private RSA/Ed25519 keys) with Multi-Factor Authentication (MFA). Root password logins are permanently disabled.

4.3 Layer 3: Data Encryption & Transport Security

- **Encryption in Transit:** End-to-end transport layer security utilizing TLS 1.3 / SSL encryption for all webhook events, API calls to DeepSeek/Meta, and client management interactions.
- **Encryption at Rest:** Internal database logs, configuration state files, and system caches are stored using industry-standard AES-256 bit encryption on the server storage media.

4.4 Layer 4: Automated Encrypted Off-Site Backups

- **Redundant Cloud Storage:** Daily encrypted snapshots of system configuration state and database logs are pushed automatically to an isolated, off-site cloud repository (e.g., AWS S3 / Cloud Storage) completely separated from primary VPS hosting nodes.

5. Data Privacy, Ownership & Retention Policy

5.1 Complete Ownership & No Third-Party Sharing

The Client (the Restaurant) retains exclusive, absolute ownership of all customer conversation logs, interaction metadata, and business configurations. Boltane strictly commits to the following privacy standards:

- **No Third-Party Sharing / Sale:** Client data, customer details, and interaction logs will **never** be sold, rented, monetized, or shared with third parties under any circumstances.
- **Client Data Access & Inspection:** The Client has the full right to inspect, export, or request a complete copy of their conversation records at any time during or after their active subscription.
- **Government & Legal Compliance:** Boltane will not disclose or yield client data to any external or government authority unless compelled by a valid, legally binding government order, warrant, or official subpoena issued under applicable laws.

5.2 Log Lifecycle & Automated 60-Day Data Destruction

To ensure high performance, security hygiene, and strict privacy control, conversation logs and activity records are structured and managed as follows:

- **Monthly Log Bundles:** Client conversation logs are compiled into segmented monthly archives.
- **Retention Window:** Monthly log archives are retained on secure servers for a window of **60 days** following the conclusion of the calendar month in which they were generated.
- **Permanent Automated Destruction:** Upon the expiration of the 60-day window, the monthly log archives are permanently and unrecoverably purged from Boltane's active servers and backup repositories through automated zero-fill/secure-wipe routines.

6. Custom Enterprise Plans ("Customize" Option)

In addition to standard tiered plans (Starter, Growth, Pro, Managed, Enterprise), Boltane offers a fully tailored **Customize Option** for clients requiring bespoke functionality, unique integrations, or specialized infrastructure allocations.

- **Bespoke Specification & Transparent Itemized Billing:** Under the Customize Option, the Client specifies their exact operational requirements (e.g., custom POS/Foodics API bridges, specialized AI models, extra data volume, or dedicated isolated servers). Boltane provides a detailed, itemized quote listing each requested feature and its corresponding setup cost.
- **Custom Recurring Subscription Rate:** The ongoing monthly subscription fee for customized deployments is determined based on the specialized infrastructure capacity, API allocations, and custom features selected by the Client, overriding standard tier monthly pricing.

7. Payment Structure

50% of the total setup fee is due upon contract execution to initiate configuration and engineering work. The remaining **50%** balance is due upon project delivery, following live activation and verification on the Client's dedicated number.

8. Refund Policy

The initial 50% setup deposit is non-refundable once engineering and configuration work has commenced, covering resource allocations. If the assistant fails to perform according to agreed specifications following the 14-day post-launch monitoring window, the remaining 50% balance is waived with no further financial obligation.

9. Ownership of Software & Infrastructure

While the Client retains total ownership of all business data and conversation logs (Section 5.1), the core orchestration engine, proprietary prompts, system scripts, and infrastructure architecture remain the intellectual property of Boltane. The Client receives a non-transferable service license to utilize the assistant for the duration of an active subscription.

10. Delivery Timeline

Configuration Tier	Estimated Delivery SLA
Starter / Growth AI / Pro	7–10 business days
Enterprise	11–15 business days
Managed — Single Branch	12–17 business days
Managed — Multi-Branch	18–30 business days (varies by branch count & menu scale)

Configuration Tier	Estimated Delivery SLA
Customize Option	Defined individually in the custom project specification

All plans include an initial 7–10 business day setup phase followed by 14 days of post-launch tuning and monitoring at no additional charge.

11. Fair Usage Policy & Modifications

Standard monthly subscription plans include processing volume scaled to typical operations. Excessive volume spikes will prompt proactive upgrade notifications without immediate overage fees. Following setup, standard plans include up to 3 prompt revisions and configuration file adjustments (up to 10 for Managed tiers). Out-of-scope functional changes are executed under separate add-on agreements.

12. Client Responsibilities & Compliance

Clients remain responsible for providing accurate menu information, prices, and business policies, and for maintaining compliance with Meta WhatsApp Business usage policies. Boltane bears no liability for inaccuracies stemming from outdated source data provided by the Client.

13. Multi-Branch Terms

Multi-branch operations are exclusive to the Managed tier for up to 10 unified brand branches. Unaffiliated restaurant locations require individual plan configurations.

14. Changes to These Terms

Boltane reserves the right to update these Terms to reflect technical or legal shifts. Active Clients will receive advance notice of material updates.

15. Contact Information

For legal, technical, or privacy inquiries regarding these Terms, contact **boltane.ai@gmail.com**.
